**Subject:** Request for exception to password duration  
**Follow Up Flag:** Follow up  
**Flag Status:** Red

DCS requests an exception to the NITC requirement to change passwords every 90 days to permit the DCS to use a six month password change cycle for the inmate accounts assigned to thin client devices used to interface with the JDE Sales and Manufacturing modules of the NIS. When the thin client is logged into the system, it is done without the inmate entering the account ID or password. The OCIO support staff installs and updates the account IDs and passwords. The thin clients are configured to sign in and allow access to only those areas of the application deemed necessary. The NIS Team set up the application's security to meet this requirement.
